INTELLIGENT SOLUTIONS...
POWERFUL RESULTS!

Sensor based Logistics with Platinum SENTRY Secure

Platinum Cargo Logistics is pleased to announce Platinum SENTRY Secure, a sensor based GPS/cellular tracking system that enables our customers to receive true, real-time tracking updates plus stored environmental data on their shipments. Utilizing both GPS and cellular technology, we are able to report real-time shipment location as well provide alerts when the shipment is opened and if it has been dropped or exposed to high temperatures.

Real-Time Data - Real-Time Alerts

Visibility of your shipment is maintained 24/7 providing you with customized email alerts for major milestones, deviation from planned route or entry/exit of an established geofence. Tracking in real-times gives you peace of mind and the assurance that you know where your cargo REALLY is instead of relying on human effort to update tracking information. Platinum SENTRY Secure also eliminates surprises. If there should be a problem in the handling of your shipment, you receive an email alert at that very moment instead of not discovering it until delivery.

Enabling Intelligent Cargo

Sensor based logistics with Platinum SENTRY Secure provides you with constant tracking via GPS and cellular technology, nationally or internationally. Using the AT&T worldwide network, Platinum SENTRY Secure combines GPS and cellular technology with sensors for light exposure, temperature, shock, motion and pressure to monitor the environments your shipment encounters. Platinum SENTRY Secure, a truly Intelligent Solution that provides Powerful Results!

PROVIDING OUR CUSTOMERS WITH "INTELLIGENT SOLUTIONS... AND POWERFUL RESULTS!"
